@gr8ful4God2

I pray Scott gets hooked up with Dr. Makis. 🙏

Dr. Makis's protocol literally just saved my 50yo friend's life when his doc gave him no hope.

In late November, he was diagnosed w/aggressive stage 4 hormone dependent prostate cancer that had metastasized to his bones (spine, tailbone, hips, pelvis) and lymph nodes.

I gave him Makis's protocol from the med journal & he started it immediately. He used the IVM/Fenben protocol and also added other supplements to it from a FB group he found. He changed his diet to a healthy one, too.

Within 8 weeks his bloodwork was already heading to normal. His onco had only chemically castrated him at this point and scheduled chemo. He only did 2 doses of chemo due to a horrific reaction. He's kept to his customized Makis protocol throughout. Two weeks ago he was declared cancer free via PET scan and blood work!!! 🙌🎉

His onco had asked before but this time demanded to know what he was taking. He'd told a nurse early on and she said do not tell doc. So, he lied to onco doc and said "nothing, just eating right." 😊

He says he's never going to stop taking his IVM/Fenben regimen, tho. 🤔 His parents, wife and 2 kids are also ecstatic. They've all shared his story & Makis's protocol paper to so many others, too.

Read a FEW of the citations from Makis's published med paper. When you see papers like this from \*2011\* on Mebendazole & mentioning Fenbendazole, it really opens your eyes & your mind:

@LivefreeorDie31

I'm using your protocols with supplements for my step dad with stage 4 prostate cancer. His PSA has dropped in just 3 months from 1900 to 6!!! PET scan later this month will confirm what's happening internally!!! Keep helping people!

AJ please follow [@MakisMD](#) and see his research and the testimonials. Dr. Makis has helped my sister shrink her breast cancer tumor from 4cm to almost undetectable (!) with his ivermectin and fenbendazole protocols. Share them with your FIL. It's his decision.

@KACarlin

My sister diagnosed with triple negative breast cancer in January. Began Dr. Makis' protocol in February and then traditional chemo. Tumor is now undetectable and here's the kicker- oncologist (Columbia Pres in NYC) and radiologist both said they've never seen that before. This is real. These repurposed drugs are effective at curing cancer. Don't be naive. These have been purposely hidden from us.

@DJKryptoni

Not only did Ivermectin (horse version) dissolve a pink itchy spot on my shoulder/neck area (along with several tags), it recently helped heal a bad gash/whole on my cats leg seal up and heal.

My cat came into the house with a nasty wound on its hind leg. Definitely looked like it would need a stitch or two.

Before going to the vet I searched the internet to see if Ivermectin has any healing properties for wounds or cuts, and found that it does. I immediately applied Iver to the wound. The next day the redness and swelling was significantly reduced. The following day the wound was smaller and appeared to be sealing up. It now looks like it's almost completely sealed up and healing.

This stuff is INCREDIBLE!!

@nessDragon1

I follow your page for my own uncle who has stage 4 prostate cancer. He is in Africa and cannot afford chemo or any treatment.

So he has been taking these for the last couple of months and his levels are reducing.

This is his only option.

Thank you for sharing.

The one cured had breast cancer. Given the all clear last month.

The other has thyroid cancer that's moved to a few bones. That was picked up late and last I heard, isn't growing. New scans soon I think.

Yes, 2 years in remission now, non hodgkins lymphoma.  
It wasn't the Dr Makis/Marik protocol, exactly, because the case pre  
dates the paper, but the ivermectin fenbendazole, iv vitamin c amounts  
match those of their paper for early stage cancer.

Me 🤖

My PET/CT scans from 4/2024 and 4/2025 pinned to my page showing the great results using Fenben and IVM among other treatments, too.

🌟 A Victory Worth Celebrating! 🌟

I'm overjoyed to share some incredible news: I'm winning my battle against Stage IV Breast Cancer, Mets to the spine with the help of some alternative medicines and therapies—ivermectin, fenbendazole, methylene blue with red light therapy, turkey tail mushroom coffee, berberine, infrared sauna, among other things! 🙌

My latest PET/CT results are nothing short of a miracle:

- ✅ Bone metastases in T5, L3, and right sacral wing: Near completely resolved!
- ✅ The lump in my right breast: Shrunk from 46x24 mm to just 30x10 mm, with SUV max dropping from 46 to 2.2!
- ✅ Cancer in my right axilla, two hilar lymph nodes in my chest, and spots of concern in my lungs: GONE!

Yes! My husband had a prostate tumor with a 4+3 Gleason score (moderately aggressive). He got High-Intensity Focused Ultrasound instead of radiation or surgery because this procedure allows you to maintain full function. About six months after his HIFU, they had him get a Pet Scan and it tested positive for cancer. The doctor said my husband most likely would still have to get a prostatectomy since it looked like the cancer came back. So they scheduled a biopsy. Luckily the soonest he could get in for the biopsy was three months. I got a video consultation with Dr. Makis, and my husband went on the protocol Makis developed for him. Three months later my husband went in for his biopsy. The doctor took 16 samples. All the samples came back negative. The cancer surgeon was amazed. He literally had a big grin on his face when he told us the news. We honestly couldn't believe it, but the doctor reassured us everything was normal. But...I'm not going to lie, the protocol is hard core. It's just as debilitating as chemo—extreme brain fog and fatigue. I know because I got cancer too after getting Covid. However, my husband got blood tests and it didn't do any damage to him.

Our daughter was diagnosed with the same, stage 3, but cervical. After chemo and radiation, (and unknown to doctor Iver/Fenben,) she is cancer free. But they said that is typical with this rare aggressive cancer. Gave her 30% chance to live 3 years. Your prognosis the same?

**Woodhaven1973** @Woodhaven1973 · May 22

They gave her a 20% chance of getting to NED/complete response. She did it in 4 months. They said it's 50/50 she stays there but that is not factoring in ivermectin/fenben. Which I believe is what got her to this point quickly and that she will stay there. Bless your daughter.

fithealthhub  
@fithealthhub

I can personally confirm the effectiveness of anti-parasiticals as a treatment for tumors. 53-yo 240 lb male, life-long health & fitness enthusiast. 5 months ago in Jan/25 I was having pain in my right kidney, blood in my urine and fevers. It was two tumors, a small one on the outside of the kidney and a large one on the inside. The only medical solution was to remove the kidney. I'm an alternative medicine proponent, so I opted against that. But time was of the essence as the tumors were now outside the kidney and could start metastasizing. I was already familiar with the Tippens Protocol, but after reading the info that Dr. Makis had been writing, instead of FenBen, I started on Feb 1/25 with Ivermectin (50mg/day) and Mebendazole (500mg/day).

Now, I'd also recently learned of a new concept on dealing with tumors – the Feral Tissue Protocol by Spencer Feldman. If you'd like to find out more about it, you can visit the link in my profile, but suffice it to say that the two protocols have worked perfectly with each other. I've had no more kidney pain or any other negative symptoms & I've felt fantastic. At some point I'll have another scan to confirm either reduction or outright elimination of the tumors.

I realize that I was not at Stage 4, nor did I take any of the Covid jabs or have any other significant risk factors. But I want to emphasize two points: 1. Despite a lifetime of health & fitness, I STILL had tumors growing inside me, judging by the size of the large one (3 inches around), for 20 years. 2. A decrease in mass size, while it will happen over time, was not my initial primary goal. Instead, I wanted to NEUTRALIZE the tumors, to render them inert tissue as quickly as possible. I can only speak for myself, but by combining the info provided by Dr Makis with that of Spencer Feldman, I believe that is exactly what happened – in 4 months. Thank you Dr. Makis. Just keep on doing what you do.

My husband's cousin only in his late 30's has turbo cancer. For the past 6 months since we both have known we've sent so much information from you and Dr. Makis. We have pleaded with them just to entertain the idea and try. They won't. The indoctrination and brainwashing runs so so deep that even with proof that we have they still don't believe it and only want to follow what the doctors and hospital say. It's heartbreaking honestly.

A man here a year and a half ago was given 2 months to live as his aggressive cancer came back. My best friend here is a cardiologist who fled the US in 2021 (like me) was treating him with the fenben and ivermectin etc protocol. A year and a half later he's not only alive and well but cancer free.

Not even this story could convince them to try it.

It's just goes to show how deep this level of brainwashing goes.

They are now preparing to lose him in the next few months when it literally doesn't have to be this way. He'll leave behind a wife and 5 children 💔💔💔

FenBen took my cancer diagnosis from “huh, psa shooting to 20 and granular palpation, let’s schedule a biopsy” to 0.5 and “thats odd, back to normal” in 7 weeks in 2017. FenBen and IVM cured my pup’s oral cancer (that had metastacized and was very vascular) in just over a month. His gumline tumor literally fell off one morning. UFB. Prayers for Scott, he did not learn from his Covid vaxx error sadly.

Chris, pancreatic stage 4 here ... my BIL. 72% reduction in tumor volume in 2 months between MRIs and only about 7 weeks total on makis protocol. Working for us when the outlook was grim. Patient says he would not even know he has cancer right now. He also eats no sugar, alkaline diet, and only natural food sou have be smart at same time.

Happy Happy news frens!!!! I am cancer free!!! Just got the news today, the CTDNA Scan came back clean and clear of cancer! I want to thank @MakisMD and @JohnDParody for their guidance on the Makis protocol, dosing and great advice. This means NO CHEMOTHERAPY THANK GOD!! Ivermectin and FenBen DOES WORK!!

@BrianFisher420

It's all in my posts. Colon cancer stage 3, surgery to remove tumor. 6ml ivermectin and 1000 mg fenben powder with a handful of other vitamins kept it from spreading and kept me from getting the first dose of chemo

Please read. I haven't spoken much about this publicly, but my husband is also fighting stage 4 metastatic prostate cancer. We've been working with Dr. Makis since October, using his protocol alongside traditional treatments. I have absolutely no doubts that Dr. Makis's protocol is helping tremendously as evidenced by the dramatic decrease in PSA as soon as my husband started taking the ivermectin and Fembez. How sad that Scott Adams is using his platform to discredit Dr. Makis and discourage many other cancer patients from seeking treatment that could be life saving. The worst part is that he is robbing them of hope. Please understand that SA is an atheist, and clearly angry about his illness. Don't let the failure of his doctors discredit a very fine physician and rob you or someone you love of hope.

t:

on't recommend I take Ivermectin and Fenben.

at least 1 year, via Dr. Makis, to no effect. There are claims c  
but I am aware of no patient who benefited from it. Nel

on't recommend fasting or any diet-related system. Son  
would have noticed if that worked.

on't recommend any cocktail of vitamins and minerals.

ch appreciate your caring, but assume I've heard about  
e. I'm overwhelmed with those same suggestions all day

 **QuiltmomK**  @QuiltmomK

I took 12mg Ivermectin for 5 days and the 2nd day my sciatica pain was gone and shoulder pain was gone—and has not returned!!

I can also personally attest that the [@MakisMD](#) protocol works.  
My wife's stage 4 breast cancer with mets to the bone and liver recently achieved a CMR (complete metabolic response) after only 2 months of following the protocol.  
I strongly urge anyone with cancer to try these off label medications.

I was shocked at his post and like others, felt he was lashing out in frustration. The protocol you provide is saving me. Markers down front 1459 and 349 to 71 in 4 months. My oncologist is extremely pleased. Thank you for your work, Dr. Makis. You are saving many, many lives!

We're one of Dr. Makis' patients and I can personally attest the following in the most objective POV:

85 days on the Protocol

- Instantaneous better Quality of life (food,sleep,energy)
- Pancreatic mass 45% reduction
- All lymph nodes regressed
- Liver mets 50% healed and 1 disappeared but 1 slightly progressed.

Bless the work of Dr. Makis. Christ is King!

Scott said in an earlier X post that "you don't know anyone who was helped by Ivermectin.." either. BS. At my urging, my mother's elderly neighbor added IVM/MenBen to his protocol for esophageal cancer and quickly regained the ability to swallow food. Read Dr. Makis' numerous substack posts and turn on your pattern recognition facilities..

Replying to @MakisMD @joeroganhq and @joerogan

@joeroganhq 100% bring on Dr. MAKIS.

My wife wouldn't be here today without his research. Forever grateful. Our youngest just turned four and her mom was able to be here and celebrate our daughters birthday.

## My Take...

It started on May 19, 2025, when former President Joe Biden announced he was diagnosed with aggressive Prostate Cancer (Gleason 9).

**Little did I know that Scott Adams would use that opportunity to announce his own Prostate Cancer diagnosis, and then attack me publicly for trying to help him.**

**Since then, I have been subjected to a highly coordinated campaign that, according to one high profile attacker and freedom fighter, former NYT journalist Alex Berenson, intends to “end” me.**

**Berenson has now staked his entire social media following on “ending me” and destroying my Ivermectin Cancer Clinic. He is writing a hit piece, coincidentally at the same exact time as his former employer New York Times is also supposedly writing a hit piece. Interesting how coincidences work.**

**Since these attacks started, hundreds of people have come out publicly with their Cancer success stories and I wanted to save them, and share them.**

**There are so many, I will have to publish them in multiple substacks, 50 cancer stories at a time. Some are very detailed, some are very short. I’m just publishing them chronologically.**

**The attackers claim these success stories don’t exist, or that they are bots, or entirely made up. You can be the judge of that.**

**I honestly think they’ve just now realized how big of a threat Ivermectin, Fenbendazole and Mebendazole are to the Cancer Drug Cartel’s profits, and they are in panic mode, activating every hidden asset they have.**

**It’s too late. The word is already out, around the world.**
